CS 32301 Human Interface Computing
Spring 2026
Department of Computer Science
Kent State University

Project 2

Project will be completed in groups of 4 to 5 students.

Part 1
Coded project 1

The main purpose of part 2 of the project will be to code the idea proposed in part 1.
For part 1 a prototype was created, now is time to put the ideas to work and make the project usable by people.

Simulating the various aspects of it can be done by the teams and no real data is required.

The platforms will have to include two major parts:

1. GUI: a fully working GUI with all the ideas proposed in part, no login to the platform is required. Security measures are not a part of the scope of the project either.
2. Data source: The code must run from file sources or a database, this is to show the expected behavior of the software. No real data is necessary, example: patient data or sensitive information.

Part 2
Final report

A final written report will be expected from the students.
This final report must include:

1. A brief description of the functionality and purpose of the platform.
2. A description of each page and its purpose. Screenshots are required.
3. For each page explain the golden rules that apply to it.

Golden Rules
Strive for Consistency
Enable frequent users to use shortcuts
Offer informative feedback
Design dialogue to yield closure
Offer simple error handling
Permit easy reversal of actions
Support internal locus of control
Reduce short time memory load

4. Explain how you expect the user to interact with each page and the functions available.

Part 3
Oral presentation SO3

An oral presentation will be required as part of the final grade for the project.
In this final presentation students will show their results to the rest of the class, including the final report as well as a fully functional project.
The presentation must cover the following topics:

- Team members.
- Introduction to the problem to solve.
- A brief description of the overall project.
- Technologies used in the development of the project.
- A brief description of the project's architecture.
- Screenshots of the project, explaining the 8 golden rules that apply to each page.
- Demo of the project
- Conclusion, about the level of competition and satisfaction with the project.

Time: 10 min

It is expected that all students participate in the final presentation, missing students or students who don't participate will not get the corresponding grade for the oral report.

Group execution

Each group consists of 4 to 5 students with one member having the role of team leader and the rest of team members.
Team leader

- Will oversee the team's tasks and making sure they're execute to following the design proposed.
- In charge of creating the final report.
- In charge of designing the team's final oral presentation.
- It is expected of the team to also perform in the development of the project, he will assign itself orders as well.

Team members

- The rest of the team will execute tasks according to the team leader's orders
- Team members can work on similar aspects of the platform but will be responsible for their own tasks assigned by the team leader.
- Team members are also expected to overseas the quality of the final report and presentation.

- Each team member is responsible for presenting their work on the final presentation.

Grading
Grading will take have two parts:

1. **Professor's evaluation: SO3**

Criteria/ Performance Indicator		**Very satisfied (5)**	**Satisfied (4)**	**Average (3)**	**Dissatisfied (2)**	**Very dissatisfied (1)**
SO3 PI1	**(Written project report)** The content is well written using correct level of technology terms and language					
SO3 PI2	(**Oral presentation)** The presentation was presented at the correct level of technology and language for different range of audience					
SO3 PI3	**(Written report)** The content is well organized (structure – introduction, project development, discussion, and conclusion)					
SO3 PI4	**(Oral presentation)** For questions, consistently listened and responded to others appropriately					
5	**Project standards:** The project follows good design standards, follows 8 golden rules and design principles.					
6	**Project execution:** The functionality of the project is correct and good user interaction.					

2. Peer evaluation

Peer Evaluation Form for Team leader (SO5)

Contents	Questions	Exemplary (5)	Satisfactory (4)	Average (3)	Unsatisfactory (2)	Very dissatisfied (1)
Manager or supervisor:	Does your team leader oversee all activities?					
	In your opinion, if you think your team leader did a good job of overseeing, what would be a reason for the decision?					
	In your opinion, if you think your team leader did not a good job of overseeing, what would be a reason for the decision					
Strategist:	Did your team leader provide appropriate plan for approaching tasks?					
	Did your team leader provide enough chance to discuss the goal setting?					
	If the initial plan was not achieved, did your team leader adjust the plan as a clear reason?					
Communicator:	Did your team leader clearly distribute the project information and progress to team members?					
	Did your team leader provide enough communications, such as email or in-person?					
	When you ask questions or discuss tasks, did your team leader provide enough feedback?					
Organizer:	Did your team leader organize various tasks and conduct documentations?					
	Did your team leader assign tasks to each team member appropriately?					
	Did your team leader build an appropriate schedule for the team project?					
Goal setter:	Did your team leader set the overall goal with team members' opinion?					
	Did your team leader set the goals for each member's task well?					
	if the set goal didn't be achieved, did your team leader modify the goals well?					

Peer Evaluation Form for Team Members (SO5)

Contents	Questions	Very satisfied (5)	Satisfied (4)	Average (3)	Dissatisfied (2)	Very dissatisfied (1)
Actively Participate	Did this team member always attended group meetings and contributed to all discussions?					
	Did this team member perform all duties assigned and actively assisted others?					
	Did this team member attend all meetings?					
Be an active Listener/Take notes	Did this team member Consistently listened and responded to others appropriately?					
	Did this team member take notes during the team meetings (submitted meeting notes)?					
	Performed all duties assigned and actively assisted others					
Complete Tasks and Assignments	Did the assigned work without having to be reminded?					
	Did this team member update and share the progress clearly?					
	Did the completed work by the team member sufficiently meet the initial goals?					

1. Peer's evaluation: SO3

Team leaders will grade each team's presentation, one peer team by team leader.

Criteria/ Performance Indicator		Very satisfied (5)	Satisfied (4)	Average (3)	Dissatisfied (2)	Very dissatisfied (1)
SO3 PI1	**(Written communication)** The content is well written using correct level of technology terms and language					
SO3 PI2	(**Oral presentation)** The presentation was presented at the correct level of technology and language for different range of audience					
SO3 PI3	**(Oral presentation)** The content is well organized (structure – introduction, project development, discussion, and conclusion)					
SO3 PI4	**(Oral presentation)** For questions, consistently listened and responded to others appropriately					

Submission details:
One single .rar file with the following documents:

- PDF file with the final report.
- PDF file with all the team members evaluations.
- PowerPoint presentation for the oral presentation.
- Folder with the project's source code, as well as a README.md file with clear instructions on how to execute the project locally.

Final grade
For the final grade, the following table will be used:

Final report	30%
Oral presentation	30%
Platform development	40%

Individual student's grade will be based on the total score given by the professor on each topic and then measured against the team's evaluation.
